Subject: Microsoft Settlement

I strongly disagree with the present settlement, and feel microsoft is getting off free.
Other companies are watching this closely, to see what they can get away with.

You must send microsoft a strong message, otherwise they will continue to go as business as usual. The consumer should always have a freedom of choice, but that went away when microsoft monopolized the market.

There are many users that are forced to use microsoft products at work, as a company policy, and they use other operating systems at home. I use OS/2, Linux and Windows at home. I have the freedom to choose what to use and I do exactly that.

Hit them Hard, or they will get the last laugh, and continue to break the law.
